

HOW TO PLAN FOR A VIDEO AND EDIT WITH VIDEO EDITORS

# How to Plan for a Video and Edit with Video Editors

Planning your video is one of the most important things you can do to make sure that you get good video footage that you can turn into a great movie during editing videos. Also, not only you need a [best professional video editing software](#) to finalize the plan videos, but also you need great footages.

Planning doesn't cost anything; it just takes a little time. Even the simplest home movie can benefit from good planning. Planning your video doesn't have to be complicated.

You just have to do a little forward thinking about your end product before you start shooting. What do you want your viewers to walk away with after viewing your movie? What effect do you want to have on your viewers? Even if they are just members of your family, you still don't want them to be bored out of their mind.

## SOME BASIC TIPS FOR PLANNING YOUR VIDEO

A lot of planning depends on the type of video that you're planning to shoot. How you plan to shoot a wedding will be different than how you shoot a sporting event. Shooting golf will be different than shooting a fast paced indoor game like basketball. After completing these actions you can plan videos.

## Make a Video Pre Production Checklist and Pack Accordingly

You've probably got most of your video camera gear in a bag that's ready to go at a moment's notice. But you'd be surprised how often one gets to the site of the shoot and

realizes that they forgot an extra battery or the AC charger. One of the most important things you can do when planning your video is to video pre production checklist and think through the shoot. Then just make a list of all of the equipment that you're going to need.

How often one gets to the site of the shoot and realizes that they forgot an extra battery or the AC charger. One of the most important things you can do when plan videos is to think through the shoot and just *video pre production checklist* that you're going to need.

Make sure you invest in a quality hardcover or soft cover video camera bag that has room for extra tapes and all of your camera's accessories. One of the most important things you can do when planning your video is to think through the shoot and just make a list of all of the equipment and video pre productions that you're going to need. Make sure you invest in a quality hardcover or soft cover video camera bag that has room for extra tapes and all of your camera's accessories.

## Traveling Overseas

If you're traveling overseas, be certain to **check the AC voltage standards** in those countries you are planning on visiting. Purchase socket adapter for you bag. Remember that in Europe, the [voltage is 220-240 volts AC](#) and that the video system they use is PAL while in North America, the standard voltage is 110-120 volts AC and the video system used is NTSC. Plan accordingly when you're visiting foreign countries.

## At the Shooting Location

Once you've arrived at your shooting location, it's time to scout around the location and think about **what you're going to shoot and best camera locations to shoot from**. Think about what you'll be shooting and how to go about getting it. It's easy to just turn on the camera and start shooting. But your movie will be much more interesting if you think through the different shots you might get.

Put some effort into considering your position. Don't shoot everything at eye level. Your plan videos will be boring. Look for high and low angle shots to give a variety to the look of your video. Your video will be much more interesting and your audience will appreciate it.

## Working with Plan Videos and Edit

After shooting the video, you need to hire a professional team of video editors. Or you can utilize video editing software and setup to edit and improve the quality of your footages. There will be a lot of footages you want to cut from the finalized video. No matter what is the subject of your video, it is always important to **polish it with high-quality video editing**.

# WORKING WITH VIDEO EDITING
